

Wetting Agent

BestWet is a non-ionic wetting agent for use on fine turf areas. It is especially designed to help prevent the occurrence of localised dry patch (LDP) which prevents healthy grass growth.

BestWet Liquid Wetting Agent

Application rates:

20-40ltrs/ha initial then 10-20ltrs/ha
200-400ml/100m²
Available in 10 & 200ltr containers

BestWet Wetting Agent Tablets (Pack of 6)

Application rates:

One tablet treats 500m²

**A concentrated, small, easy to use, wetting agent tablet.
Each tablet contains humic acid to help the plant overcome stress.**

BestWet Wetting Agent Irrigation Tank Tablet

Application rates:

1 tablet per 2,500-3,500ltrs of water
will treat approximately 1 hectare

**A concentrated, large tablet, specially designed for use in irrigation.
Each tablet contains humic acid to help the plant overcome stress. Will also help lubricate irrigation pipes, emitters and pumps. This product is safe for use through any irrigation system.**

Yucca Natural Wetting Agent

Application rates:

20ltrs/ha
200ml/100m²
Available in 10 & 20ltr containers

A safe, natural surfactant, with Bio-Stimulant properties derived from Yucca plant extract.

Pervade Soil Penetrating Agent is designed specifically to quickly move water through the soil profile, allowing oxygen to be pulled in as the water moves down.

If the rootzone is already suffering from hydrophobic conditions, use Pervade to get moisture into the dry soil area.

Pervade Soil Penetrating Agent

Application rates:

General: Use in any area where even distribution of water through the soil structure is the desired objective. Pervade has a very low toxicity index to plants. However, to achieve maximum effectiveness, the product should have the benefit of adequate water to reach the soil surface.

Fine Turf Areas: Apply 5-20lt/ha with initial application. Make maintenance applications every 3-4 weeks as needed to assist infiltration and percolation.
